

Woolacombe - Isolocork on SIP Extension

Spray Cork Project Case Study

Project overview

External finishing of a new SIP extension in Woolacombe. The wall build-up was prepared for the coating system before Isolocork spray cork was applied externally, creating a continuous textured cork-based finish across the extension.

Construction stage

SIP extension during construction before the external wall finish was installed.

Wall build-up

External membrane and timber battens forming part of the wall build-up before boarding.

Board preparation

External boards fixed and joints and fixings prepared before the spray cork application.

Isolocork application

Isolocork spray cork applied to the prepared external surface with openings protected.

Completed Finish

Woolacombe - Isolocork on SIP Extension

Finished surface
Close view showing the continuous textured Isolocork finish.

Completed extension
Completed Woolacombe extension with the Isolocork external finish.

Project summary

This project shows Isolocork used as the external finish to a new SIP extension. The photographs document the construction build-up, preparation of the external boards, spray application and the completed textured finish.

Location	Woolacombe, Devon, UK
Application	External finish to SIP extension
Existing substrate	Prepared external SIP sheathing / boards
System	Isolocork spray cork
